

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application.

Listing of Claims:

1. (Currently Amended) A method for displaying phases in which components of a system for providing a web architecture framework are delivered comprising the steps of:
- (a) displaying a pictorial representation of an existing system including a plurality of components;
 - (b) ~~presenting a first set of components of a system for providing a web architecture framework;~~
 - (b) compiling a listing of additional components for implementation into the existing system;
 - (c) determining a first set of the additional components for implementation in a first implementation phase;
 - (d) determining a second set of additional components for implementation in a second implementation phase;
 - (e) modifying the pictorial representation of the existing system to show a pictorial representation of the first set of components being indicia coded to indicate that they are to be delivered in a the first phase; and
 - (e) ~~presenting a the second set of components of a system for providing a web architecture framework;~~
 - (f) modifying the pictorial representation of the existing system to show a pictorial representation of the second set of components being indicia coded in a manner unique with respect to the indicia coding of the first set of components to indicate that the second set of components is to be delivered in a the second phase.
2. (Previously Presented) A method for displaying phases in which components of a system for providing a web architecture framework are delivered as recited in

claim 1, wherein a legend is presented which defines the indicia coding with respect to the phases of delivery of the components.

3. (Previously Presented) A method for displaying phases in which components of a system for providing a web architecture framework are delivered as recited in claim 1, wherein the components of the existing system are selected from the group of components including security services, network services, web services, client services, integration capabilities, data services, directory services, management services, operation services, and developer services.
4. (Previously Presented) A method for displaying phases in which components of a system for providing a web architecture framework are delivered as recited in claim 1, wherein the components of the existing system are selected from the group of components including commerce-related services, content-related services, administration-related services, customer-related services, and education-related services.
5. (Previously Presented) A method for displaying phases in which components of a system for providing a web architecture framework are delivered as recited in claim 1, wherein the indicia coding is selected from the group of indicia coding including texture coding, color coding, and shading coding.
6. (Currently Amended) A method for displaying phases in which components of a system for providing a web architecture framework are delivered as recited in claim 1, wherein the step of displaying a pictorial representation of an existing system including a plurality of components also includes displaying additional components that may be implemented into the system. ~~wherein the existing system is a web architecture framework.~~

7. (Currently Amended) A computer program embodied on a computer readable medium for displaying phases in which components of a system for providing a web architecture framework are delivered comprising:
- (a) a code segment that displays a pictorial representation of an existing system including a plurality of components;
 - (b) a code segment that ~~presents a first set of components of a system for providing a web architecture framework,~~ compiles a listing of additional components for implementation into the existing system;
 - (c) a code segment that determines a first set of the additional components for implementation in a first implementation phase;
 - (d) a code segment that determines a second set of additional components for implementation in a second implementation phase;
 - (e) a code segment that modifies the pictorial representation of the existing system to show a pictorial representation of the first set of components being indicia coded to indicate that they are to be delivered in a the first phase; and
 - (f)(e)—a code segment that modifies the pictorial representation of the existing system to show a pictorial representation of ~~presents a second set of components of a system for providing a web architecture framework,~~ the second set of components being indicia coded in a manner unique with respect to the indicia coding of the first set of components to indicate that the second set of components is to be delivered in a the second phase.
8. (Previously Presented) A computer program for displaying phases in which components of a system for providing a web architecture framework are delivered as recited in claim 7, wherein a legend is presented which defines the indicia coding with respect to the phases of delivery of the components.
9. (Previously Presented) A computer program for displaying phases in which components of a system for providing a web architecture framework are delivered as recited in claim 7, wherein the components of the existing system are selected from the group of components including security services, network services, web

services, client services, integration capabilities, data services, directory services, management services, operation services, and developer services.

- Q1
10. (Previously Presented) A computer program for displaying phases in which components of a system for providing a web architecture framework are delivered as recited in claim 7, wherein the components of the existing system are selected from the group of components including commerce-related services, content-related services, administration-related services, customer-related services, and education-related services.
 11. (Previously Presented) A computer program for displaying phases in which components of a system for providing a web architecture framework are delivered as recited in claim 7, wherein the indicia coding is selected from the group of indicia coding including texture coding, color coding, and shading coding.
 12. (Previously Presented) A computer program for displaying phases in which components of a system for providing a web architecture framework are delivered as recited in claim 7, wherein the step of displaying a pictorial representation of an existing system including a plurality of components also includes displaying additional components that may be implemented into the system. wherein the existing system is a web architecture framework.

13. (Currently Amended) A system for displaying phases in which components of a system for providing a web architecture framework are delivered comprising:
- (a) logic for displaying a pictorial representation of an existing system including a plurality of components;
 - (b) logic for ~~presenting a first set of components of a system for providing a web architecture framework, compiling a listing of additional components for~~ implementation into the existing system
 - (c) logic for determining a first set of the additional components for implementation in a first implementation phase;
 - (d) logic for determining a second set of additional components for implementation in a second implementation phase;
 - (e) logic for modifying the pictorial representation of the existing system to show a pictorial representation of the first set of components being indicia coded to indicate that they are to be delivered in a the first phase; and
 - (f)(e) logic for modifying the pictorial representation of the existing system to show a pictorial representation of ~~presenting a second set of components of a system for providing a web architecture framework,~~ the second set of components being indicia coded in a manner unique with respect to the indicia coding of the first set of components to indicate that the second set of components is to be delivered in a second phase.
14. (Previously Presented) A system for displaying phases in which components of a system for providing a web architecture framework are delivered as recited in claim 13, wherein a legend is presented which defines the indicia coding with respect to the phases of delivery of the components.
15. (Previously Presented) A system for displaying phases in which components of a system for providing a web architecture framework are delivered as recited in claim 13, wherein the components of the existing system are selected from the group of components including security services, network services, web services, client services, integration capabilities, data services, directory services, management services, operation services, and developer services.

16. (Previously Presented) A system for displaying phases in which components of a system for providing a web architecture framework are delivered as recited in claim 13, wherein the components of the existing system are selected from the group of components including commerce-related services, content-related services, administration-related services, customer-related services, and education-related services.
17. (Previously Presented) A system for displaying phases in which components of a system for providing a web architecture framework are delivered as recited in claim 13, wherein the indicia coding is selected from the group of indicia coding including texture coding, color coding, and shading coding.
18. (Previously presented) A system for displaying phases in which components of a system for providing a web architecture framework are delivered as recited in claim 13, wherein the step of displaying a pictorial representation of an existing system including a plurality of components also includes displaying additional components that may be implemented into the system. ~~wherein the existing system is a web architecture framework.~~
